

Calculator Use Policy

Administrative Procedure for the Use of Calculators in Elementary Classrooms

The School Board of Brevard County encourages the appropriate use of calculators for instruction with principal permission beginning with 4th Grade. "Appropriate use," as defined by the board, does not include substituting results produced by calculators for expected student performance relative to skills in mathematics. Students shall be required by their teachers to demonstrate mastery of mathematical concepts and procedures representative of skill expectations for the grade in which instruction is provided *without* the use of a calculator.
